## AQUA-BLOCK

Water Resistant Block-Out

### General Description

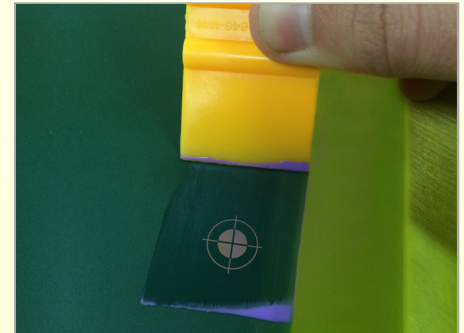

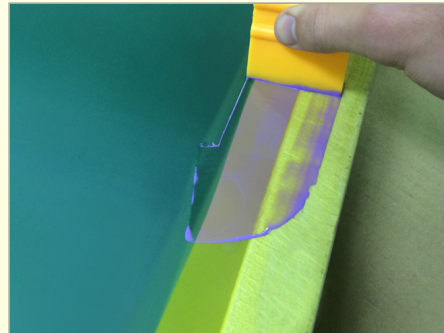

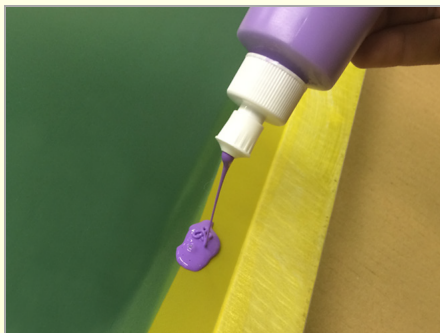

Aqua-Block is a water-based, yet water resistant, violet block-out designed to fill the open areas of the screen not covered by the emulsion. Use for masking several designs on a screen until ready to print or for multi-color work. Aqua-Block is very good for touching up pinholes.

### Advantages

- Ideal For Water-Based, Discharge, and Plastisol Inks
- Dries Fast
- Easy To Use
- Useful With All Mesh Counts
- Pleasant Odor
- Coverage In One Coat
- High Contrast Violet Color
- Durable / High Abrasion Resistance
- Easily Removed During The Reclaim Procedure
- Non-Hazardous
- Biodegradable / Drain Safe

### Application

1. When the screen is dry and free of contaminants, pour block-out on the print side of the screen. Spread over the open areas of the screen until completely filled.
2. Aqua Block is easily removed when reclaiming the screen with CCI Stencil Removers, which are available in concentrate and ready-to-use formulas.

### Quick Tip:

Use blockout to fill gaps between the emulsion edge and the frame on the print side. This eliminates the need and expense of tape on the print side.  
Give it a try today.

### Sizes Available:

8 OZ  
Gallon

Pint  
4 x 1 Gallon

Quart  
5 Gallon Pail

4 x 1 Quart
