

Chemical Consultants INCORPORATED

CHEMCON 100, 300, & HI-FLOW

Instant Adhesive

GENERAL DESCRIPTION

ChemCon adhesives are designed for bonding most types of substrates instantly. They are ideal for bonding fabric (mesh) to wood or aluminum frames. The low to medium viscosities allow full penetration between bond lines and promote rapid curing. ChemCon adhesives are a 1 part system: they do not require the addition of a catalyst. ChemCon adhesive's bond is initiated on contact, which dramatically increases output in the screen re-stretch department. The use of an instant adhesive hardener will instantly cure and bond surfaces together.

Quick Tip:

Surfaces to be bonded must be clean and dry.

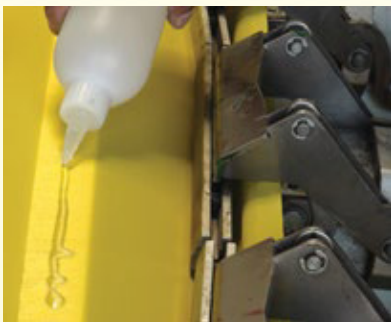

ChemCon Hi-Flow ~ very low viscosity

ChemCon 100 ~ low viscosity

ChemCon 300 ~ medium viscosity

ADVANTAGES

- Easy to use
- Economical
- Instant Bond
- Ideal for use with wood or aluminum frames
- No mixing required
- Long shelf life
- Non-Hazardous

Step 1. Apply an even layer of instant adhesive, using the applicator tip provided, to the surface to be bonded.

Step 2. Use a scraper to spread adhesive evenly.

Step 3. Apply ChemCon Adhesive Hardener, aerosol or liquid directly over the adhesive

Packaging

1 lb. bottle 12 x 1 lb. bottle case

Also Available: ChemCon Adhesive Kit Includes:

- 1 lb. ChemCon Adhesive (Any viscosity)
- 1 - can ChemCon Adhesive Hardener (Aerosol)
- 1 - spreader
