

# DTF ADHESIVE POWDER

DTF adhesive powder is a specialized adhesive formulation designed for use in direct-to-film printing processes. This adhesive powder facilitates the transfer of designs onto various fabrics ensuring excellent adhesion and durability of the printed image. Our formulation offers improved stretch and allows the curing temperature to be between 260° F - 330° F depending on fabric.

## Features:

- Excellent Adhesion: Provides strong adhesion between the printed design and the substrate, ensuring long-lasting and durable prints.
- Recommended for use on 100% cotton, polyester and nylon.
- High Quality: Formulated with high-quality ingredients to ensure consistent performance and superior results.

## Application:

- Print the desired design onto the transfer film.
- Sprinkle a thin, even layer of DTF adhesive powder onto the printed design, covering the entire area.
- Shake off any excess powder and ensure even distribution.
- Curing temperature to be between 260° F -330° F depending on the fabric used.

## Storage:

Recommend storage at 70°F to 75 °F (21°C to 23°C) and between 40 to 60 percent humidity to avoid product clumping. Avoid storage in direct sunlight or in extreme temperature conditions. Shelf Life: 6-12 months when stored according to recommended conditions.

**Available sizes:** 2lb, 5lb, 44lb
