

ES-1

EMULSION SOAKING SYSTEM

Chemical Consultants, Inc. has continued to lead the Screen Printing Industry in development of reclaiming related equipment for the printer who needs to have demands met or problems solved. The ES-1 is a dual purpose emulsion soaking system. This unit can be used to soften and remove the emulsion, from the image area, with water by continuous agitation. This greatly increases the screen makers ability to keep up with production demands. The ES-1 can also be used to recirculate an emulsion remover continuously, which allows the reclaim department to clean more screens efficiently. The ES-1 uses a two-stage filtration system to remove the solids left by the emulsion.

ES-1

Features / Benefits

- ❖ Stainless Steel Construction, Guaranteed Leakproof
- ❖ Accommodates 20 Screens of Sizes up to 25" x 36"
- ❖ Includes Screen Hold Down Assemblies
- ❖ Complete with Air Operated Recirculation Equipment
- ❖ Two Stage Filtration System
- ❖ Dramatically Reduces Chemical Usage
- ❖ Dramatically Reduces Water Usage
- ❖ Speeds up Production
- ❖ Easy to Use
- ❖ Low Maintenance

Product Details

- ❖ Requires 40 P.S.I. Air Supply
- ❖ Overall Dimensions: 62"W x 40"D x 37"H
