

TT-250 + SG-5000 + SPOTKLEEN

Spot Remover Exhauster

CCI offers a simple and durable line of Spot Remover equipment. The TT-250 is the affordable answer to exposure and compliance problems in the spot cleaning process. This unit incorporates a power vacuum suction to exhaust solvent fumes away from the operator. The brisk air movement also dries the fabric during the spot cleaning process.

The TT-250 is a lightweight portable table top design requiring minimal space. A large screen and angled arm allows cleaning of all types of apparel. It has two power outlets (115V), which can be utilized for a spot cleaning gun and other accessories. The TT-250 is constructed with high grade stainless steel mounted to a solid base. This is a perfect spot exhaust system for screen printers, embroiderers, contractors and retailers.

TT-250
