PREP-RITE

MESH PREP DEGREASER / WETTING AGENT

General Description

Prep-Rite is a semi-viscous formula for degreasing and wetting all types of screen fabrics, including polyester, nylon, and stainless steel. Prep-Rite leaves the fabric free of oils, contaminants and residues, which will ruin the emulsion coating. Ideal for use with capillary film stencils. Prep-Rite creates a powerful “sheeting” action that dramatically reduces the incidence of “pin-holes” and “fish-eyes” when coating your screens with emulsion. It also helps control hard water and other contaminants found in the rinse water. Prep-Rite is recommended for use as a “Mesh Prep” for new fabric.

Quick Tip:

Be sure to Flood rinse the screen well. In this step, it is important to think of high volume and not high pressure water.

Advantages

- **Creates A Powerful “Sheeting Action”**
- **Ideal For Use With New Fabric**
- **Easy To Use**
- **Safe On All Types Of Mesh**
- **Non-Flammable**
- **Non-Hazardous**
- **Biodegradable / Drain Safe**

Application

USE FULL STRENGTH - DO NOT DILUTE

Prep-Rite can be applied manually by a sponge, or spray bottle.

Step 1. After removal of ink, block-out, and emulsion, apply Prep-Rite to the screen(both sides).

Step 2. Scrub screen with non-abrasive pad or brush.

Step 3. Flood rinse the screen starting at the top and washing all residue off the screen.
